- E. Replace nozzle

5. Replace all filters

6. Evaluation of electronic compartment

7. Perform a 24 hour test

- A. Printing with ink at a rate of 1 print per second

8. Detail to new condition

Refurbishing

All other printers are restored to a new condition through a rigorous 7 step process.

1. Inspection

Printer is completely disassembled and inspected for electronic, hydraulic and pneumatic operations.

2. Complete Cleaning

Printer is thoroughly cleaned and another inspection is made of each component.

3. Rebuild

All nozzles and ink valves are rebuilt.

4. Parts Replacement

All solenoid valves, shutoff valves, diaphragms, springs, filters, mufflers, ink pressure regulators are replaced. Tubing that is restricted, stained or damaged is replaced to guarantee top performance of the refurbished printer.

5. Evaluation

Electronic system is evaluated.

6. Reassembly and Testing

Printer is then reassembled and tested under production conditions for 24 hours to ensure problem free operations.

7. Detail

Printer is then detailed before packing and shipping. The results are amazing.

Rental equipment is available while your equipment is being rebuilt.
